

⚡ 920 kcal • High fat

💡 Swap naan for roti → save 200 kcal

🔒 User-triggered. No background scan.

AI Food Lens

The intelligence layer that shows users what their meal will do to their body — before they order.

Screenshot → AI

Floating button

No app switching

Built for the moment of decision.

Problem

Food ordering is optimized. Awareness is not.

Users are making eating decisions blindly.

Delivery apps show taste, price, and speed — but not the health cost of the cart.

No nutrition context

Calories and macros are hidden at checkout.

Decision comes too late

Users regret after purchase, not before it.

Health apps are separate

Logging friction kills behavior change.

Checkout screen

Paneer Butter Masala	420 kcal
Butter Naan × 2	360 kcal
Coke	140 kcal
Delivery fee	₹ 29

Blind checkout → unhealthy choices

Insight

Behavior changes when insight appears at the point of choice.

We do not need more food logs.

We need the right answer at the right moment — inside the ordering flow.

“The best health intervention is the one that appears before the choice is made.”

Solution

A floating AI layer that reads the screen you choose.

Tap one button. Get the answer instantly.

User-triggered capture, AI analysis, and a compact result bubble — all without leaving the app.

Result bubble

“Swap naan for roti → save 200 kcal”

User Experience

The result must feel instant, helpful, and a little addictive.

The UI is designed around one outcome:
more informed ordering.

What the user gets

Fast: results appear in under 2 seconds
Clear: plain-language food and health insights

What the user sees

Trust: capture is explicit and user-triggered
Privacy: screenshot is not stored by default

Why it sticks

Action: one-tap deep explanation
Retention: history, streaks, smarter suggestions later

Technology & Privacy

Powerful AI. Strong Privacy.

PROCESSING PIPELINE

What happens when you tap the button

- 1 Tap Floating Button**
You tap "Check My Items"
- 2 Permission (One-time)**
Android asks for screen capture permission. You allow it.
- 3 Screen Capture**
The screen is captured once and stored in memory only.
- 4 AI Analysis (On-device + Secure)**
Vision AI reads food items and estimates nutrition. No data is saved or shared.
- 5 Result Shown**
You get instant results in a compact bubble. The screenshot is discarded.

✓ **Screenshot discarded after use**
Nothing is saved. Nothing is stored.

TRUST LAYER

Your privacy is built in

- No Background Monitoring**
We never watch or listen. You're always in control.
- No Silent Capture**
Screen is captured only when you tap the button.
- No Gallery Access**
We don't access your photos or files.
- Food Only, Always**
We analyze only food items. No other content.
- Transparent by Design**
We clearly show what we read and why.

🔒 **Your trust is our foundation**
Private. Secure. Built for you.

One tap. Instant insights. 100% private.

We process. We show. We respect your privacy.

Market Opportunity

Start with food delivery. Expand into all consumption moments.

The wedge is narrow. The platform can become broad.

Phase 2

Grocery basket analysis

Phase 3

Restaurant menu intelligence

Phase 4

Personal health coach

Why this matters

Every time a user buys food, we can surface guidance. The initial product is the smallest surface area of a much larger AI consumer-health platform.

Business Model

Freemium first, then premium insights and partnerships.

Monetize through utility, not ads.

Free	Plus	Pro
₹0 - Limited scans - Basic nutrition summary - Privacy-first analysis	₹149/mo - Unlimited scans - Deeper AI explanation - History & reminders Most likely consumer tier	B2B - White-label insights - Brand partnerships - Wellness reporting

Why Us / Ask

A focused wedge with a big platform outcome.

Sharp focus.
Clear outcome.

Small wedge today.
Massive platform tomorrow.

Why this team can win

We start with a sharp use case that users understand in **one sentence**.

We build a product that is **visually obvious**, **fast**, and **useful** at checkout.

We expand from food delivery into groceries, dining, and **broader consumer health intelligence**.

What we are raising / building next

Build MVP with **screenshot-based AI analysis**.

Validate **retention** and **willingness to pay**.

Use early users to refine nutrition **accuracy** and **trust UX**.

We're not building another health app.

We're building the **intelligence layer** between **impulse** and **decision**.

We help people make better food decisions right before they spend.

A floating AI assistant that reads a user-selected screen, explains the health impact, and turns checkout into a smarter decision.

AI Food Lens

Built for the moment of decision.
